SUMMARY

Passionate about using technology to create a positive impact, I'm always eager to learn, solve meaningful problems, and take on new challenges. I believe technology should be used responsibly to improve people's lives and build a more sustainable future. Outside of work, I volunteer with social and environmental organizations, contributing to causes I care about.

WORK EXPERIENCE

EDP

04/2025 - Present

Cloud Backend Engineer

Developing backend solutions for EDP's smart energy platform, helping customers better understand their electricity consumption through detailed appliance-level insights and personalized energy efficiency recommendations.

- Design and develop backend APIs using TypeScript and Node.js.
- Design and implement ETL processes and perform data analysis in Python to process and validate energy consumption data.
- Work closely with data scientists and product teams to deliver scalable, data-driven features.
- Develop and maintain cloud services using AWS serverless technologies.

Technologies: TypeScript, Node.js, Python, AWS (Lambda, API Gateway, CloudFormation, CloudWatch, DynamoDB, SNS, SQS, RDS), REST APIs, ETL, SQL, Git.

Lynxai

10/2022 - 02/2024

Software Engineer

Developed a data-driven ESG platform to support sustainability analysis and regulatory compliance.

- Designed the UI/UX and reusable component library.
- Built data pipelines, AWS Lambda functions, and backend APIs with Node.js and Python.
- Managed CI/CD pipelines, A/B testing, and scalable databases (RDS MySQL and DynamoDB). Implemented authentication and security features.

Technologies: JavaScript, TypeScript, Python, React, Redux, React Query, AWS, REST APIs, Firebase, Figma, SQL, GitHub CI/CD, Postman.

Software Developer

Worked with a U.S. telecommunications client to develop cloud-native solutions in an Agile environment.

- Automated business workflows using Appian.
- Developed Node.js APIs and microservices.
- Built serverless solutions with AWS Lambda and API Gateway.
- Developed and maintained .NET MVC applications.

Technologies: JavaScript, TypeScript, Node.js, .NET MVC, Appian, AWS (Lambda, API Gateway), REST APIs, Jenkins, JIRA, Postman, Microservices.

Freelancer Developer

01/2019 - Present

Developed websites and web applications for businesses with a focus on performance and scalability.

- Built responsive frontends and backend APIs.
- Deployed and maintained cloud infrastructure and databases.
- Developed **Recycular**, mobile application in partnership with a Portuguese recycling company to promote circular economy practices in the recycling industry.

Technologies: TypeScript, Next.js, React, Express, Firebase, Vercel, AWS (EC2, Lambda, Amplify, RDS, DynamoDB).

EDUCATION

Computer Science and Business Management

09/2016 - 06/2020

ISCTE - Instituto Universitário de Lisboa

Main subjects: OOP; Software Engineering; Operative Systems; Computer algorithms and modeling; Computer architecture.

Technologies: Java; Javascript; C; Eclipse; SQL studio; Power BI.

Erasmus+ in Computer Engineering

Tallinn University of Technology

01/2019 - 07/2019

Main Subjects: Matlab; Cybersecurity; Financial management; Software Engineering

Technologies: Python; Javascript

CERTIFICATES

AWS Certified Developer

09/2022

Practical Python Programming

01/2022

Certified Appian Developer

12/2020

VOLUNTEERING

Assistent Teacher - Associação Filhos do Céu, Brasil

02/2024 - 05/2024

Supporting children development through academic assistance, creative activities and programming lessons
